TEST POINTS GLASS BEAD INSULATOR

Our PCB test point and terminals feature a large loop for easy probe attachment or to facilitate the clipping on of other components.

They are ideal for components which need frequent replacement and are also suitable for raising hot components above the surface of the PCB.

A glass bead in a choice of eight colors for identification purposes ensures a snug fit on the board. White, yellow, black, brown, blue, pink, red and green are available. Other colors available upon request.

The unique shape of the test point will not damage through-plated holes during assembly yet prevents any movement prior to soldering.

Also ideal as terminals.

- Three sizes
- Choice of eight colors

RoHS Compliant

PERMA-SEAL TERMINALS

Perma-Seal terminals and splices provide a rugged, environmentally sealed connection for wire sizes 8 to 22 AWG that will insulate, seal and protect joints from physical abuse and abrasion, water, salt and other corrosive compounds. The inner wall of the heat-shrinkable Perma-Seal sleeve is lined with a special hot-melt adhesive that is inert at room temperature permitting wires to be inserted easily into the splices and terminals.

WIRE PIN TERMINALS

Wire Pin Terminals offer quick and easy connections in applications where set screws or clamps are used to make electrical contact with the wire. Wire pins simplify the insertion of stranded wire into European style terminal blocks and other components, by preventing wire strand foldback, assuring a proper electrical contact and a stronger connection than just wire alone.

DT DIRECT TERMINAL LEG SPRING CONNECTION

Simply insert solid conductors directly into the terminal block. This is the hallmark of the direct insertion system. A screw driver is only required for releasing the conductor. The direct insertion method is of particular advantage in very restricted wiring spaces.

NKK SmartSwitch™ Kits

NKK's SmartSwitch™ programmable LCD switches offer control designers new, expansive options. NKK's SmartSwitch™ technology is suited for a wide variety of applications, displaying industry specific text and graphics with real-time sequencing. Complex switching can be attained when the switches are used in ganged or grouped fashion to facilitate sequential functions. The SmartSwitch™ simplifies and improves complex, multi-decision operations. NKK Switches' SmartSwitch™ can be programmed to display an infinite variety of text, graphics or moving images.

Possible applications include industrial control panels, medical equipment, telecommunication systems, audio-video panels, test and instrumentation devices, simulation equipment, diagnostic tools and automated assembly.

SMARTSWITCH™ DEMONSTRATION KIT

The NKK SmartSwitch™ Demonstration Kits are used to display bitmaps, up to 64, that have been created via the user's PC. These kits are supplied with a red/green LCD module, software, USB cable and programming instructions. Once downloaded, the bitmaps can be displayed and advanced by means of the address control lines without the need of a PC. These kits can be incorporated into your end product as the PCB has been designed with allowance for standoffs. Both units can be made portable by using the battery box which is sold separately.

Features

- Can be programmed on line or through stand-alone software provided on CD.
- LCD can be interchanged to meet user's specific color application once designed in.

SCHURTER MSM16, MSM19 AND MSM22 SERIES: VANDAL-PROOF MOMENTARY MECHANICAL SWITCHES

The robust vandal-proof MSM switch has a high shock resistance and an extremely flat front construction of only 1.7mm. Housing and actuator are made of top-quality stainless steel. The MSM is designed for quick mounting: the wires are simply plugged onto the quick connect terminals of the detachable contact module. CLARE OPTICALLY ISOLATED SOLID STATE RELAYS

The OptoMOS® line of solid state relays uses discrete semiconductor components and the patented OptoMOS architecture to deliver fast, reliable, bounce-free switching in a compact design. The small 4-pin SOP relays combine state-of-the-art, double-molded, vertical-construction packaging with high performance to give you a reliable product. The dual pole OptoMOS relays combine two independent relays into a single component. And, the common input OptoMOS relays provide a design alternative where two independent outputs are driven by the same input signal.

Features:
- Low drive current
- High reliability
- Optically isolated I/O
- Operating Temp: -40°C to 85°C
- Machine washable, wave solderable
- AC/DC switching

Applications:
- Telecommunications
- Instrumentation
- Datacommunications
- Electronic switching
- Industrial controls
- Medical equipment
- Security

CLARE POWER SOLID STATE RELAYS

This new family of of normally open 1-Form-A solid state relays combines the best of both Clare and IXYS technology. The i4-PAC™ is a part of the IXYS family of iso PLUS packages and features a unique process where silicon is soft soldered onto the Direct Copper Bond (DCB) substrate instead of the usual copper frame. The DCB ceramic not only provides 2500V isolation capability from the leads to the backside of the package but also enables a very low thermal resistance (0.45 K/W from junction to heatsink) compared to conventional external mounted isolation material.

Features:
- Handles loads up to 10A (rms)
- Voltage Ratings up to 1000V
- Switching speed (on/off): 20/5(ms)
- Isolation Voltage - 2500Vrms
- Input Control Current - 10mA

Applications:
- Consumer Appliances
- Test and Measurement equipment
- Industrial controls
- Medical Equipment
- Transportation equipment
- Robotics/Motor controls

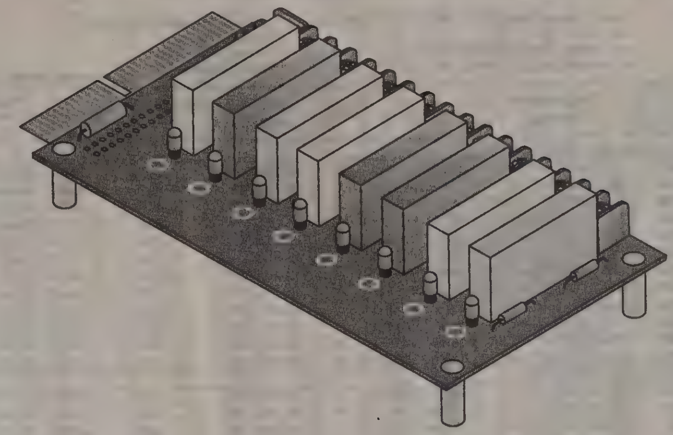
crydom™

RoHS Compliant This page of product is compliant.

CRYDOM SOLID STATE OPTO-ISOLATED BOARD MOUNT I/O MODULES



Solid State I/O switching modules deliver an electrically clean, photo-isolated noise-free 'output' interface from logic level control systems to external loads such as motors, valves, solenoids, etc. - or an 'input' interface from the load or sensors to microprocessor or computer-based logic level systems. Designed for long, reliable service in demanding industrial environments.

Features:

- Maximum turn-on / turn off time: 20 / 30 msec
- Zero-Cross switching on AC only output

OMRON G3VM SERIES: MOSFET RELAYS

Features:

- Industry's smallest MOSFET relays
- Solid state technology means hundreds of millions of operations
- Cast in white mold resin which reflects more light from the LED back to the MOSFET driver than black resin. White resin also dissipates heat better than black resin, so relays can be placed closer together on the board.
- G3VM-3FL has a current limiting feature

Applications:

- Automated test equipment
- Communications
- Security
- Medical ultrasound equipment
- Automotive diagnostic equipment

An independent firm ran a test on the only part of the G3VM that could waver in performance - the LED. After simulated operation of 100,000 hours (equivalent to 11+ years!) the G3VM was still operating successfully!

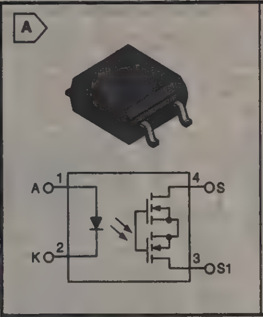
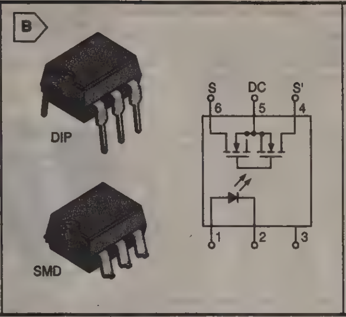
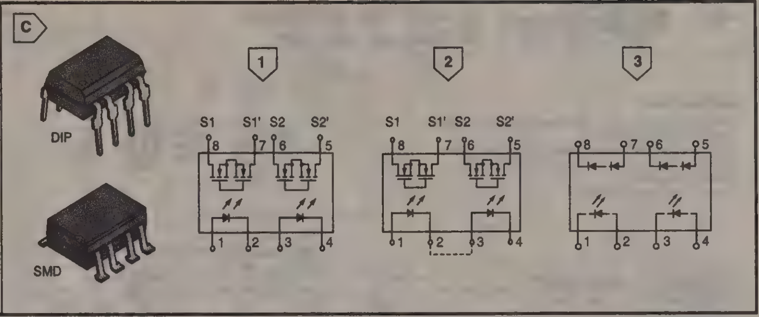
VISHAY Solid State Relays







Vishay's Solid State Relays (SSRs), previously sold under the Infineon, Siemens, and AT&T brand names, deliver fast switching while optically isolating and protecting equipment from damaging external high-voltage spikes. By eliminating the majority of wire bonds found in other SSRs, Vishay's monolithic structure has set the performance standard. With no moving parts, our solid state relays are noiseless, bounce-free and reliable, commonly replacing electromechanical relays. Used in industrial, automotive, and communication applications, all of our solid state relays feature low power consumption, small packaging, and low turn-on current. Exceeding industry standards, they are approved by VDE, UL, CSA and other safety regulatory agencies.

Applications:

- General Telecom Switching
  On/off-hook
  Ring Relay/Dial Pulse
  Ground Start/Fault Protection
- Instrumentation
  Automatic Tuning/Balancing
  Flying Capacitor
  Analog MultiplexOn/off-hook
- Industrial Controls
  Triac Predrivers
  Output Modules

Safety Standards:

UL/BSI = UL Recognized (E52744) & BSI (7980)
UL/VDE = UL Recognized (E300068) & VDE (VDE0884)
UL/CSA = UL Recognized (E52744) & CSA Approved (093751)
UL/BSI/CSA = UL Recognized (E52744), BSI (7980) & CSA Approved (093751)
